

Video Head End setup for EMTV in Papua New Guinea

Video Head End using Satellite and Optical Medias

Customer Situation

- The customer was looking at building Video Head end for SD channel on IS19 using Satellite and Optical Medias for their local TV Channel

Challenges

- Dealing with Papua New Guinea logistics to the country
- Stringent timelines
- Optimal costs to meet the budget constraints
- Laying of Fibre cable
- Integration of Mux with ABB CAS
- Technical Support Services for 2 Months

Actions Taken

- Complete study of the requirement, built a design based on Thomson Compression
- Planning ahead of the logistics and rollout
- Meticulous installation of RF and Compression
- Work on project management and system integration solution
- Operational training of the staff

Results and Benefits

- Successful implementation of the Network
- Complete system integration of Video Head across main and 4 remote locations
- Timely Execution of the project
- Training to the end user
